SUMMARY

Commentary

We had 3 strong volatility indicators this week, and it certainly was a volatile week.

There was a Bullish indicator at the end of the week. Friday was the most Bullish day.

The Moon and Sun formed a Trine aspect on Thursday. We should have seen a higher close within +/- 1-day. Usually it is the day before or the day of the aspect. If both of those days close lower then the day after is almost a sure thing.

The Calendar Indicator was Bearish through Wednesday then turned Bullish.

NOAA forecast for the week were flat. I've never seen this before. I wonder if their service was affected by the CloudShare incident.

Table A		Table B

Matrix Summary

The Matrix Summary was off by two days. Maybe if we had the NOAA forecast this week it might have been right on or off by only 1 day which is what we usually expect.

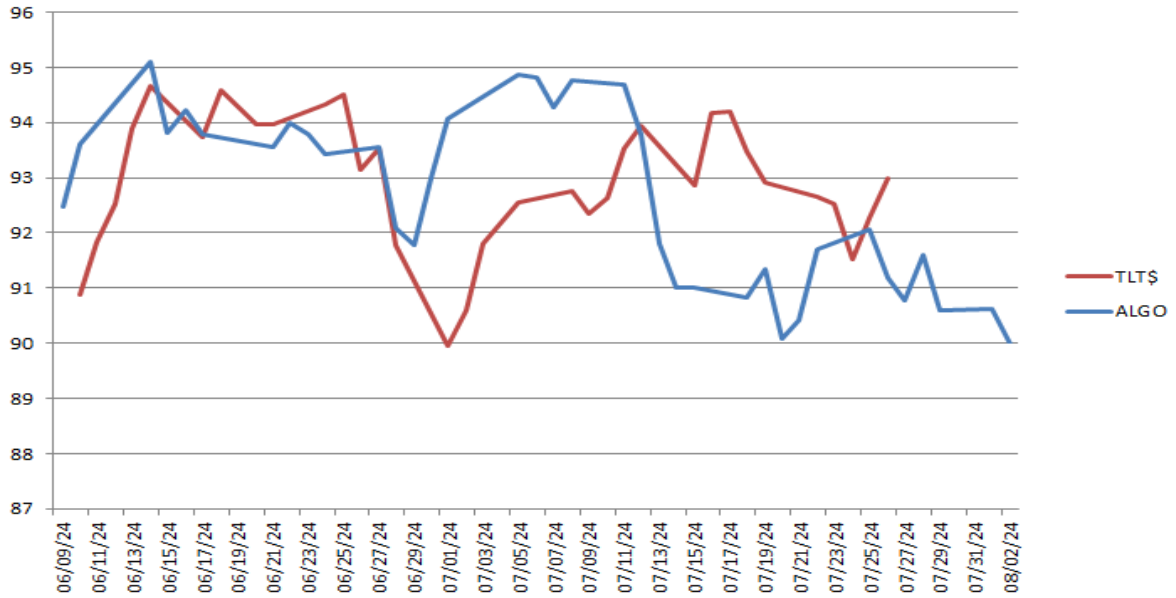

The Summary is created by applying weighted values to the indicators in the Weekly Matrix.
