Weekly Matrix Commentary

We started the week with a Bullish bias. Unfortunately, the big dip on Monday due to the DeepSeek news sent the market low enough it could not recover.

By Wednesday, the matrix summary had failed to accurately predict the closing direction for the SPY. This indicator has a +/- 1-day window, so it was time to adjusted it back one day. It then accurately predicted the correct position the SPY would close for the next three days, and led to 3 successfully binary option trades making us a profit of 75%, 90% and 150%.

The Algo forecasts for AAPL, IWM, TLT, QQQ, GLD and USO worked out well.

The Bitcoin forecast is a bit off but overall doing well

All indicators have a +/- 1-day window in which their energy should be seen.

I though it might be more helpful if I display the daily activity in a candlestick chart format instead of a bar chart.

Forecast has been adjusted by one day.
