USO		0.68%	-1.15%	-0.67%	1.77%	-1.29%	-0.70%

All indicators have a +/- 1-day window in which their energy should be seen.

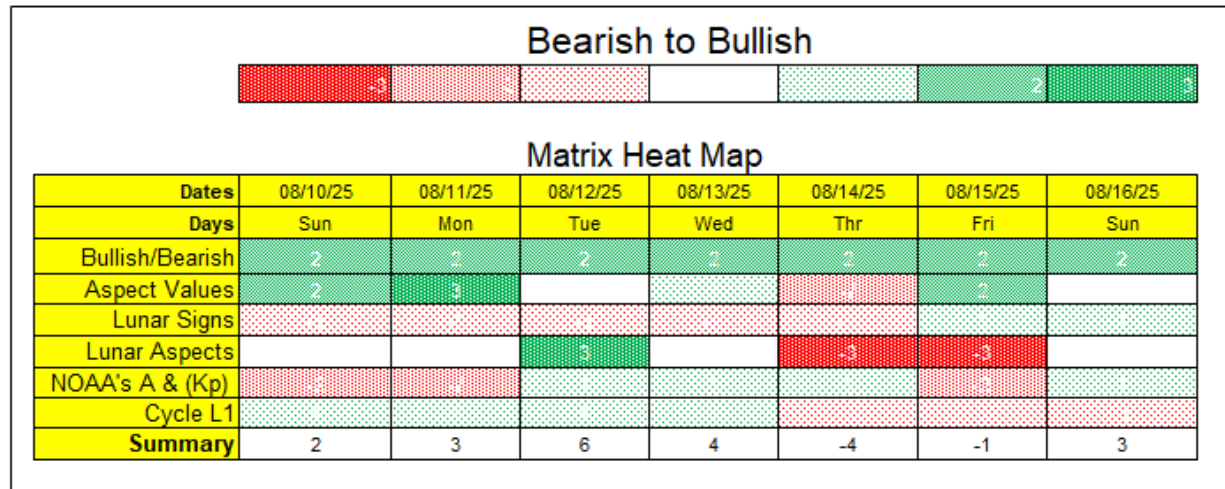

This week displayed a blend of bullish and bearish market dynamics. On Monday, both energies were balanced, making predictions unreliable unless one significantly dominated. However, Monday's notably bearish NOAA forecast suggested a potential higher close on Tuesday if Monday ended lower, which it did, and Tuesday indeed closed higher.

On Wednesday, NOAA revised their forecast, indicating bearish conditions for Friday and Saturday. This aligned with a bearish Mars-Saturn aspect and a Sun-Moon square on Friday, pointing to likely lower closes on Thursday and/or Friday. The indexes reflected this, with most showing losses over these two days, except for the DJIA, which managed a slight gain.

Despite high volatility indicators on Thursday and Friday, closing price movements stayed below 1%. However, both days experienced significant intraday swings.

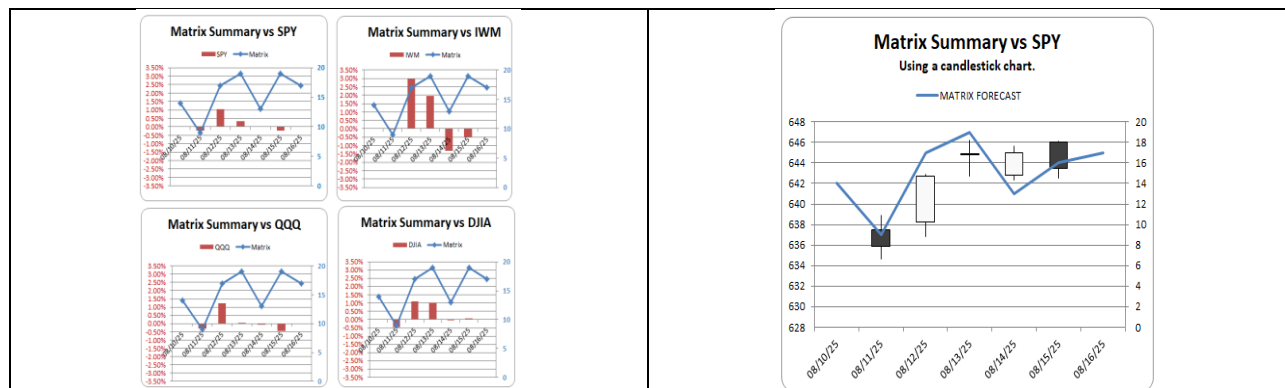

Matrix Heat Map

Tuesday was clearly the most Bullish day of the week with Thursday being the Bearish.

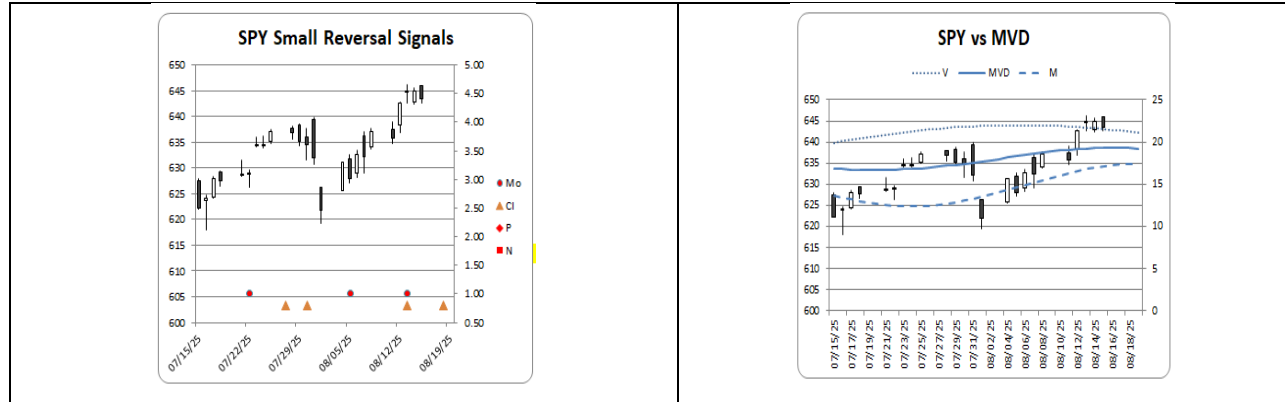

Matrix Summary

The Summary correctly forecast a higher or lower close on 3 days.

SPY Indicators

The double reversal signal on Wednesday appears to be working. QQQ, IWM, and SPY fell after their highs on Wednesday. DJIA continued to climb to set a weekly high on Friday but fell back to the Wednesday high by the end of the day.
