Summary

Weekly Matrix Indicators

Overall, the indicators leaned slightly bearish. The DJIA and IWM finished the week marginally higher, while the SPY, SPX, and QQQ posted weekly losses.

On Tuesday, NOAA peaked at 70 (7), an unusually bearish reading and one of the highest I have observed. Additionally, Monday featured a Mars–Saturn square. When Mars forms a hard aspect with an outer planet, markets often experience a pullback. Consistent with this, the DJIA, SPY, SPX, and QQQ all closed lower on both days.

Once the bearish influences played out, a bullish response followed. Wednesday proved to be the most bullish session of the week.

Thursday and Friday were relatively quiet, aside from a bearish spike in the NOAA forecast.

Heat Map

No strong signals were present, but even the weaker ones were effective. Tuesday, Thursday, and Friday carried bearish indications, though only Tuesday and Friday closed lower. Wednesday was bullish, and the indices closed higher. Overall, we correctly forecasted 3 out of 4 days.

Matrix Summary

Mondays are not included in the analysis. As usual, the indicators forecasted three days correctly.

SPY Small Reversal Signals

These indicators are doing a good job of forecasting 2 to 3 day reversals. The reversals could last longer but 2 to 3 days is the minimum to be expected.
