Algo Forecasts

What are Algo Forecasts: http://oss.cc/education/algo_forecasts.pdf

The **blue line** forecasts direction and magnitude, not price.

Red circle = Short-term bearish move expected

Green Circle = Short-term bullish move expected

Summary

The **Heat Map** identified Thursday as the most bearish day of the week, yet the market closed higher on that session. The **Matrix** flagged Friday as the most bearish day. Given these signals, one or both of those days were expected to produce a lower close. An additional confirming indicator was the Moon transiting Scorpio from Wednesday through Friday, reinforcing the expectation of a market pullback.

Wednesday's session produced mixed results, with some indices closing higher and others lower. Thursday delivered a broad rally across all indices. With the bearish pressure still unresolved, a move lower on Friday became highly probable — and that is precisely what occurred.

The **Moon trine Sun** aspect on Wednesday carried an expectation of at least one higher close within a plus-or-minus one-day window. Indices closed lower on Tuesday and mixed on Wednesday, making a higher close on Thursday a near certainty — which was confirmed.

The **Matrix Summary** achieved a **100% accuracy rate** in predicting higher or lower closes from Tuesday through Friday.

The Volatility Indicator was at level 3 on Friday. A +/- 1% move is expected on such days. We did see it in the QQQ's and the average when we look at the daily sum of DJIA, SPY, IWM and QQQ. We also saw a 2.79% intraday swing in the SPY.

Matrix Summary

Mondays are not included in the analysis. As usual, the indicators forecasted three days correctly.

SPY Small Reversal Signals Magnitude (SSRSM)

When the **dotted blue line** moves above **0.5**, there is a high probability of a 2 to 3 day reversals. The reversals could last longer but 2 to 3 days is the minimum to be expected.
