Algo Forecasts

What are Algo Forecasts: http://oss.cc/education/algo_forecasts.pdf

The **blue line** forecasts direction and magnitude, not price.

Red circle = Short-term bearish move expected

Green Circle = Short-term bullish move expected

Summary

Heat Map

Tuesday and Wednesday each received a score of 4, making them the most bullish days of the week. Both sessions closed higher. Friday registered as the most bearish day, with the major indices closing lower.

Weekly Matrix

The Bullish/Bearish Indicator remained bullish through Wednesday before turning bearish. A similar pattern was observed in the Lunar Signs, which stayed bullish through Tuesday before shifting bearish. Notably, Tuesday fell on the 14th of the month, a calendar date that has historically produced more bullish closes than any other.

The NOAA forecast turned bearish on Monday and Tuesday, with Tuesday carrying the strongest bearish signal. Given the strength of the other bullish indicators on Tuesday, it appears the NOAA energy was reflected in Monday's market action instead. Unfortunately, the updated NOAA forecast was not released until Monday evening, limiting its usefulness for advance forecasting.

Matrix Summary

The Matrix correctly forecast higher closes for Tuesday and Wednesday, as well as a lower close for Thursday. Although the forecast for Friday was bullish, the major indices finished the day lower. However, they did close above their opening levels, indicating intraday strength despite the negative finish.

SPY Small Reversal

A sharp upward move at the beginning of the week was followed by the New Moon on Tuesday. The index subsequently moved lower and, based on current signals, is expected to continue weakening into next week.

Heat Map Methodology

The Matrix Heat Map is a simplified version of the full Matrix that applies adjusted weightings to its underlying values. Because Monday forecasts have historically produced approximately 50/50 outcomes, they are excluded from the Heat Map analysis.

Matrix Summary

Mondays are not included in the analysis. As usual, the indicators forecasted three days correctly.

SPY Reversal Signals

When the **dotted blue line** moves above **0.5**, there is a high probability of a 2 to 3 day reversals. The reversals could last longer but 2 to 3 days is the minimum to be expected.
